* All returns are time weighted and net of fees. Returns from the Pathfinder Real Fund are presented based on the Class C Master series. Inception and 2013 returns include the 10 months from inception in March 2013. Returns greater than one year are annualized. The custom cost of living and CPI provide general information and should not be interpreted as a benchmark for your own portfolio return. The custom cost of living represents an equally weighted (at inception) basket of Teranet-National Bank National Composite House Price Index™, UBS E-TRACS CMCI Food Total Return ETN ETF (FUD:NYSE), United States Gasoline ETF (UGA:NYSE) and Canadian import prices from Statistics Canada in Canadian dollars. We created the custom cost of living index to give investors another way to measure their cost of living. It has some differences versus CPI; for example, CPI measures shelter costs as the cost of renting a home versus the custom index which measures it as at the cost of purchasing a home. A bachelor may view renting as an accurate gauge of shelter costs. On the other hand, a mother and father who want to raise their family under the security of the same roof without the risk of forced relocation likely views home ownership as a more accurate gauge of shelter costs. Weights between the Geographical/Asset Allocation and the Sector Allocation charts might not reconcile due to long and short positions. Further details of the Pathfinder Real Fund are available on request. The Custom Cost of Living benchmark is made up of the Bloomberg CMCI Food Index, the United States Gasoline Fund, the Teranet Canadian Residential Real Estate Price Index, the CollegeBoard posted average Tuition Cost for Private Undergraduate Education, and Canadian Import Prices.
